

# Retina Visions

Precision in Pixels: Automating asset inspection with machine learning

# Precision in Pixels: Automating asset inspection with machine learning

# Our eyes on your roads

- Footage via a Google Pixel camera soft-installed onto the windscreen
- Single cable plugged into power outlet
- Tamper proof, plug-and-play system: No interaction required from driver, automatic stop-start recording in line with ignition and movement
- Camera sends live stream of footage to Retina Visions' local Amazon Web Servers
- Defects identified by models and made available in web portal. Data integrated into client's EAM via API
- Constant evolution: Our model automatically trains and improves itself through machine learning

50mm 7:14

# The Problem: Draining Time and Efficiency

- Legacy approach requires human inspections to log individual defects
- Reliance on public complaints to pinpoint problem areas
- Manual data entry reduces accuracy (subjectivity) and efficiency
- Low inspection frequency stretches time frames

EE 50mm 7:14

# The traditional model

Inspector conducts targeted inspections

Inspector exits vehicle for inspection

Inspector manually enters data into a paper-based template

Employee in the office manually enters data into asset maintenance system

Reliance on public reporting via call centre

Inspector manually enters data into a tablet

***There is a better system already being used by Councils and State Governments. Here's how it works...***

50mm 7:14

# Harness the power of AI

- Our camera is used to conduct automated assessment across an exhaustive list of road and path defects each time the vehicle is driven
- Footage is uploaded to servers where it is processed and graded in near real time utilising artificial intelligence
- Output data is automatically sent to the Asset Maintenance System or data lake via API

50mm 1:14

# Our clients trust us...

- Queensland Department of Transport and Main Roads
- Transport for NSW
- Moreton Bay Regional Council
- Canterbury Bankstown Council
- Transurban
- Downer
- Shoalhaven City Council
- Griffith City Council

***We are making a material difference to the workforce efficiencies and bottom line of all our clients...***

"Improved capture of road corridor defects  
(we know our network better)"

"Better use of operational resources to address  
defects"

"Increased output and efficiency of outdoor  
staff / contractors"

"Improved prioritisation of work orders to  
address defects"

**Shoalhaven  
City Council**

"Greater ability to filter and triage defects  
by risk and consequence"

"Faster response times for severe defects"

"Proof of damage for Natural Disasters"

"Reduced safety risks (particularly high-speed roads)"

# Inside our cutting-edge technology...

- What is Machine Learning? Automated improvements and algorithm training creates a system that teaches itself to deliver perfect performance
- Computer Vision empowers automated decision making and identification of defects
- The synergy of these two technologies allows for an automated, accurate, comprehensive system that outperforms traditional models and creates a cost-effective, comprehensive defect catalogue

RETINA VISIONS v1.06

**CLICK TO PLAY RETINA VISIONS' SYSTEM DEMONSTRATION VIDEO**

00:00:06:18

# Retina Visions' system capabilities are expanding

- Stormwater assessment
- Rail assessment
- Roughness index readings
- Signage inventory
- Defect measurements

*Retina Visions'  
cameras identify and  
analyse an exhaustive  
list of defects...*

ROADWAY

SIGNAGE

LINEMARKING

# Data Catalogue: Roadway

- Kerb & Channel
- Litter / Debris
- Barriers / Guardrails
- Potholes
- Cracking
- Crocodile Cracking
- Shoving
- Rutting
- Raveling
- Flushing
- Vegetation
- Overhanging Branches
- Edge Damage
- Ponding Water
- Sweeping
- Roadkill
- Graffiti

50m 1:1.4

# Data Catalogue: Signage

- Speed limit signage
- Parking signs
- Stop / Give way signage
- Roadwork
- School Zones
- Bent / Faded signage
- Bent guideposts

# Data Catalogue: Linemarking

- Faded chevron paint
- Faded messaging
  - Speed limits
  - Bike and bus lane markings
  - Pedestrian crossings
  - Street parking
- Faded linemarking

# *Data Catalogue: Footpath*

- Cracking
- Displacement
- Crocodile Cracking
- Damaged Tactiles
- Edge Damage
- Edge Drop
- Faded Linemarking
- Litter/Debris
- Overhanging Branches
- Ponding Water
- Pothole
- Sweeping
- Temporary Repair
- Vegetation

# How Retina Visions is setting the new industry standard

30%

179%

x3

75%

x8

50mm 1:1.4

# **30% reduction in public phone complaints**

Reduces admin tasks – our  
flexible API has ability to  
integrate into existing EAMs

**179% increase  
in number of  
defects fixed**

Real-time processing, high  
accuracy, high frequency

# **x3 increase in defect identification**

A broad and ever-increasing catalogue of defect types – Retina Visions has been shown to triple the number of defects being identified

**75% efficiency  
improvement in  
road assessment**

Increased opportunity to  
redeploy resources to other  
critical operational activities

**x8 efficiency  
improvement in  
footpath assessment**

We have turbocharged defect  
identification on footpaths  
with our AI capabilities
